

Project Document

Objective

We are planning to create a platform where any user can log in and connect their **Shopify, Google Ads, Google Analytics, and Meta Ads accounts**.

Core Functionality

1. Data Integration

- Our tool will take access to these platforms and fetch all relevant data.
- The data will then be processed and filtered using **Gemini and ChatGPT API**.

2. Dashboard

- Users will see their performance data in one unified dashboard.
- The dashboard will show insights, recommendations, and real-time campaign performance.

3. AI Recommendations & Automation

- The tool will generate **recommendations for improving campaigns**.
- Users can click “**Apply Recommendation**”, and the changes will be automatically applied to their campaigns.

4. Campaign Management

- The system will have direct access to update campaigns across platforms.
- This ensures fast, automated optimization without manual effort.

5. Reporting

- Users will receive **daily reports on WhatsApp** with campaign performance summaries and insights.
