

## **SCOPE OF WORK**

The mobile application is envisioned as a dynamic, scalable and multilingual extension of existing Jaadu Ginni Ka learning ecosystem. The scope of work is as mentioned below related to the features and delivery:

- **Onboarding Module:** Helps new users get started by showing key features and guiding them through setup. Easy, quick and user-friendly.
- **Latest Help Tutorials:** Quick guides and tips to help users learn new features and solve common issues.
- **User Registration & Profile Management:** Lets users sign up, log in and manage their details with ease. Secure and straightforward
- **Integration with Course Library and Learning Management System (video, audio, document-based content):** Seamlessly connects the app to the course library and learning management system, giving users easy access to video, audio and document-based learning materials. Supports smooth content delivery and progress tracking.
- **Quizzes & Assessments:** Allows users to test their knowledge with interactive quizzes and evaluations. Supports multiple question types, instant feedback, and progress tracking to enhance learning.
- **Master Assessment & Authenticated Certification:** Provides final evaluations to measure overall learning. On successful completion, users receive verified certificates to showcase their achievements.
- **Gamification and Experiential Learning:** Enhances user engagement through game-like elements. Promotes hands-on learning with interactive activities that make it fun and immersive.
- **Progress Tracking & Analytics:** Monitors user activity and learning progress with real-time insights. Helps users understand performance, identify gaps and improve outcomes through data-driven analytics.
- **Integration with AI Driven Engine and Backend System:** Connects the app with an AI-powered engine and backend system to deliver content, recommendations and efficient data processing for a smoother user experience.
- **Notifications:** Keeps users informed with timely alerts about updates, reminders, new content and important activities.
- **Media Gallery:** Displays a collection of images, videos and audio files in an organized, user-friendly format.
- **Success Stories:** Showcases real-life achievements and experiences of users who benefited from the platform. Inspires others through testimonials, case studies and personal journeys.
- **Multilingual Support:** Offers access to the app in 10+ Indian languages. Ensures a more inclusive and personalized experience for users across regions, with easy language switching and localized content.
- **Integration with Content Upload & Management Interface:** Connects the app with a backend interface to view the uploaded and managed learning materials. Supports various formats like video, audio, documents and ensures smooth content updates.
- **Secure local storage practices for offline content:** Ensures downloaded materials are safely stored on the device using encryption and access controls. Protects user data and content integrity while enabling offline access.
- **Security and Privacy Compliances:** Implements robust measures to protect user data and ensure privacy. Includes data encryption, secure authentication, and regular checks to maintain trust and compliance across user interactions
- **End-to-End Data Encryption:** Protects user data throughout its journey from transmission to storage using advanced encryption protocols. Ensures that sensitive information remains secure and inaccessible to unauthorized parties, maintaining confidentiality and trust across the platform.
- **Others:** We are also discovering the below elements which are **very crucial** for the success of the delivery of the project:
  - a. Dedicated Team for Strong Follow-up and Coordination with the existing Solution partner
  - b. Updation /upgradation of Android Application
  - c. Google Playstore Management & Support

- d. Daily/Weekly/Monthly Reporting
- e. Integrated with National Level Dashboard and Connected Dashboards
- f. One Stop Data Driven Dashboard
- g. Rating/Feedback and Crash Monitoring
- h. Change Requests to handle the backend changes in the Mobile Application
- i. Impact Analysis for any change in the backend
- j. Development Operations and AMC Support till June 2026

**Delivery Timeline:** The delivery timeline for the Mobile Application will be 45-60 Days.
